1.INTRODUCTION

1.1 Overview

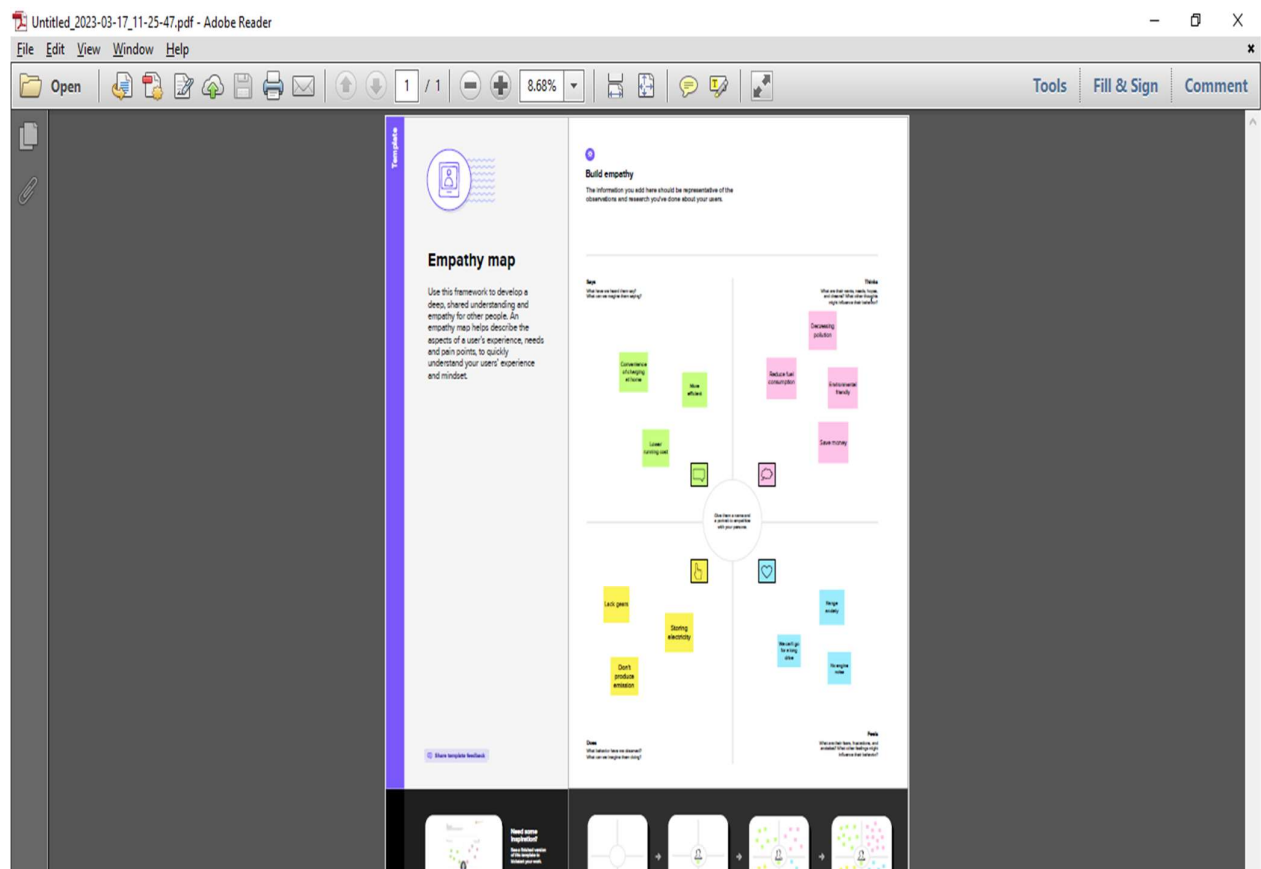

In this project we analyse Visualisation Tool for Electric Charge and Range Analysis

1.2 Purpose

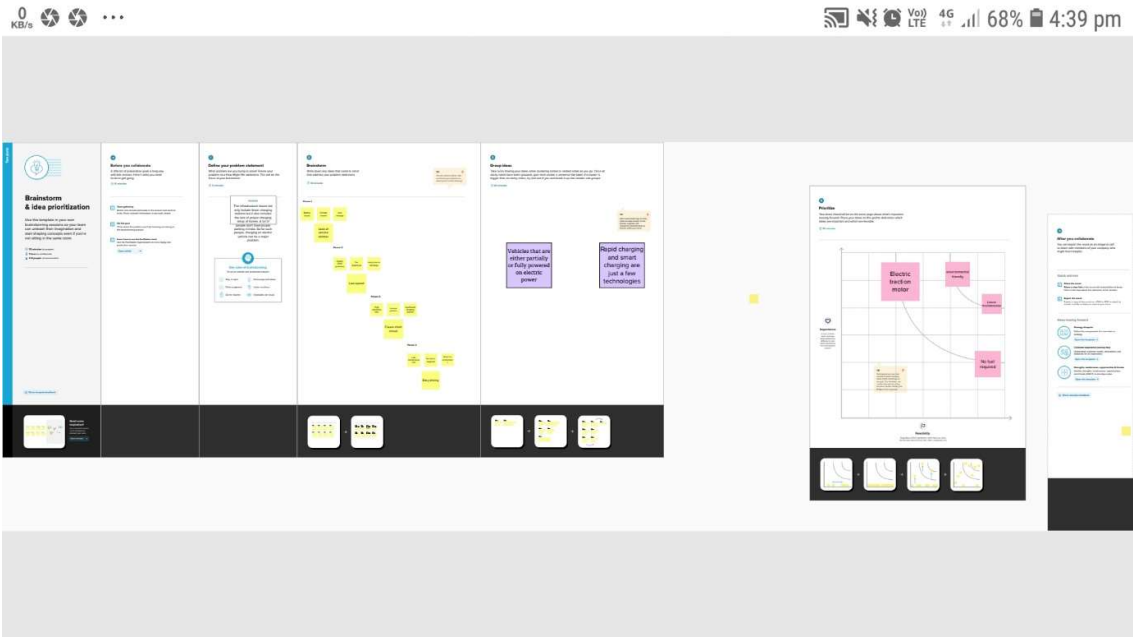

Our project is useful for the process and control the energy and also control the speed of the motor and torque it produces.

We offer modern Analytics solutions for Electric Vehicles

Car Start

E-Car Start

E-Car Start is a complete analytics tool for electric vehicles all over the world.

The Electric Vehicle (EV) is not new, but it has been receiving significantly more attention in recent years. Advances in both EV technology and battery technology have led to increased automotive market.

4 ADVANTAGES & DISADVANTAGES

ADVANTAGES:

The result of this project helps the Researchers and Experiments experts to analyse the electrical charge and range analysis.

DISADVANTAGES:

The current year data are not included in this project.

5 APPLICATIONS

This project helps to know about the charging stations in India, top most efficiency brands and also prices for different cars.

6 CONCLUSIONS

We analyse about the visualisation tool for electric charge and range analyse includes, charging stations in India, charging station by region and type, price of electric cars by different brands and number of modals, brand filtered by power train type, brand according to body styles and top speed for different brands.

7 FUTURE SCOPE

This project is useful for the researchers to analyse about the electric vehicle in future use. I wish to develop the project to then next level by adding some features.
